

Using the counting books to learn the numerals and their Numicon representation

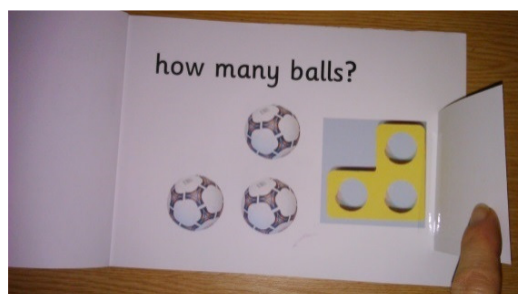

The early counting books can be used initially to learn the number names and recognize the numerals and their Numicon representations.

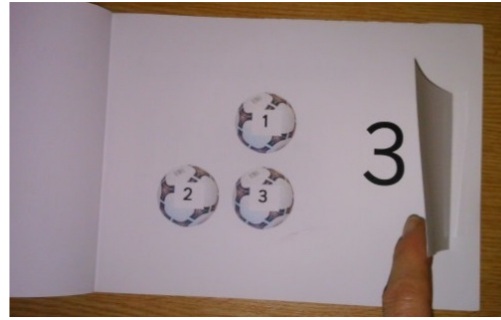

These books allow the child to focus on one numbers at a time.

Such number books are available for numbers 0 to 10.

The same set items are displayed on two pages. On the first page the set of items and the Numicon representation hidden under a flap of paper. On the beginning you may wish to omit the flap – so you are teaching rather than testing. The next page shows the same image alongside the numeral.

The books help to teach number recognition, one to one correspondence, the count sequence and cardinality, (how many?)
